

# Participant Handbook

A practical guide to your day-to-day experience in BEACON NSCLC-04.

---

## Before your first visit

Please bring a photo ID, your insurance card (for billing non-study care only), and a complete list of your current medications, supplements, and vitamins. Plan for the screening visit to take 3–4 hours. A caregiver or family member is welcome to accompany you.

## Typical visit flow

Most study visits follow a similar rhythm: check-in and vital signs, a brief symptom review with the study nurse, blood work, study-drug administration or dispensing, and a wrap-up with the research coordinator. The first visits are longer; later visits are typically shorter.

## Reporting symptoms

Between visits, please contact the study site promptly if you experience new or worsening symptoms, hospital admissions, or emergency care. Contact information for your site is available on the Find a Site page and at the back of this handbook.

## Medications and lifestyle

Some medications, including over-the-counter products and supplements, can interact with the investigational therapy. Please tell the study team about any changes to your medications. Continue your normal daily activities unless your care team provides specific guidance.

## Travel and scheduling

Appointments are scheduled in advance to help you plan around work and family commitments. If you need to reschedule, contact the research coordinator as early as possible — some visits have narrow windows that must be respected per the protocol.

## Questions and support

Your research coordinator is your primary point of contact for study-related questions. No question is too small. If you prefer, you can send questions ahead of a visit so the team can have answers ready when you arrive.

This is a demonstration document for BEACON NSCLC-04. Sample content — not a substitute for the official study document reviewed with your care team.
